## Noise and Vibration Control Engineering: Principles and Applications

Cloth Bound

Edited by Leo L. Beranek; Istvan. L. Ver

Prepared by the world's leading acoustics company, BNN Laboratories, it covers every aspect of noise and vibration control.

Item #: 0471617512

Price: \$200.00

Examines engineering principles for designing quiet conditions into pumps and power plant equipment, air conditioning systems, industrial machinery, factories and more. Methods for designing appropriate noise and vibration control treatments are also discussed.

Techniques for assessing conditions are demonstrated as well as methods for designing appropriate noise and vibration control applications. A condensed collection of current authoritative design information, criteria and references are also included.
